Community Violence Intervention in Chicago

FALL 2023 REPORT

**Community violence
intervention organizations
meet people where they are.**

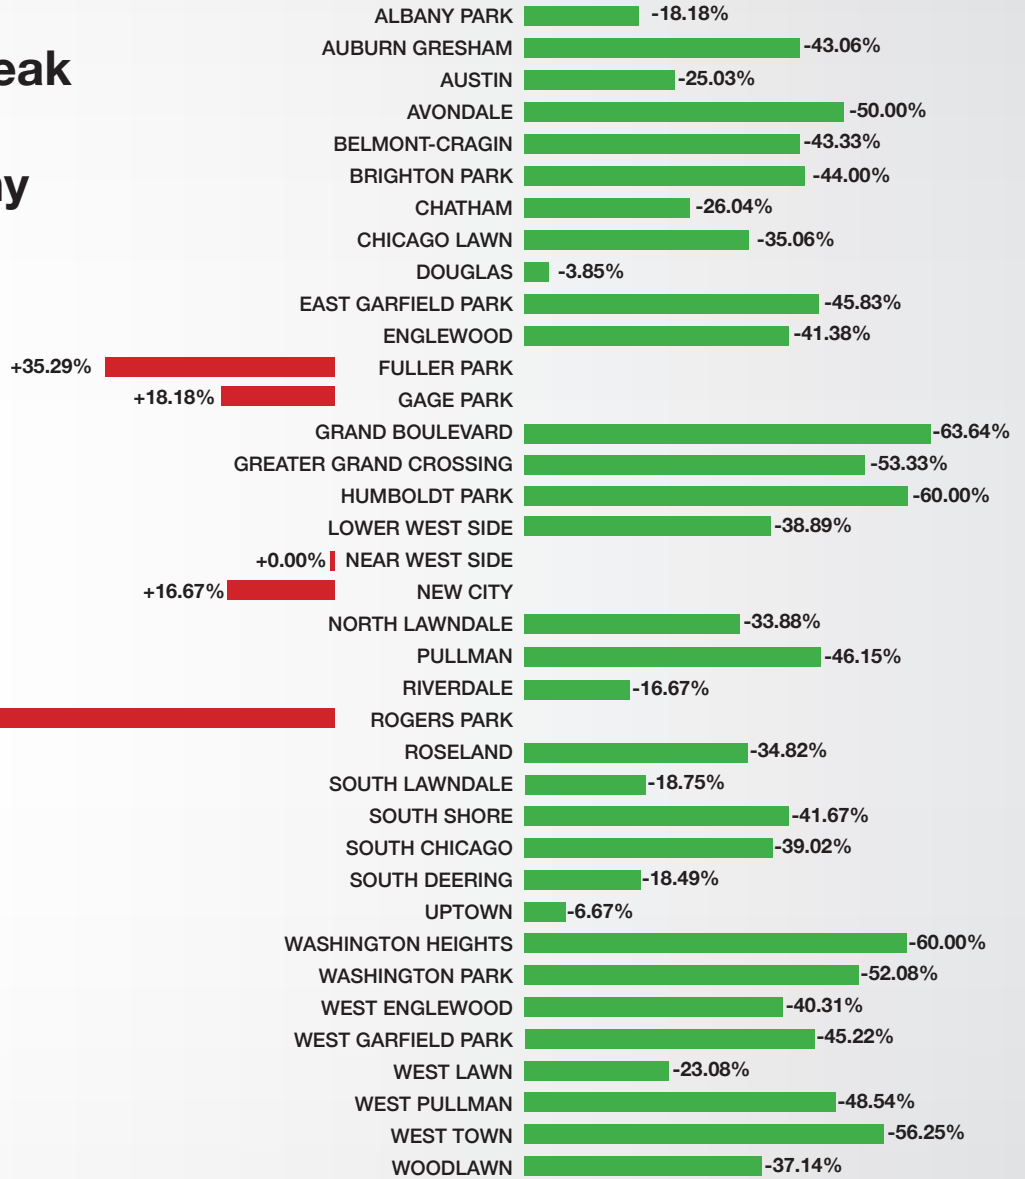

Starting in 2016, with initial funding from the philanthropic sector, a handful of community violence intervention (CVI) organizations began serving individuals at high risk of shooting or being shot with a menu of services that include outreach, life coaching, trauma treatment, education and job training. Today, as public funding at the city, county and state level has increased, Chicago's CVI network has grown to more than two dozen organizations that are currently active in nearly half of Chicago's 77 communities, including all of those with the highest levels of gun violence. Collectively, they serve more than 3000 individuals, representing about 15-20 percent of the highest risk population.

In addition to the core menu of services, CVI activities include:

- Occupying dangerous locations during the highest-risk hours to deter gun violence
- Intervening and mediating disputes among high-risk individuals
- Negotiating non-aggression agreements and peace treaties among active street factions
- Supporting gun violence victims and their families coping with injury, loss of life and financial and emotional stress
- Helping families with housing, substance abuse, legal issues and emergency expenses
- Supporting the City of Chicago in managing large youth gatherings.
- Recruiting and training the next generation of outreach workers.

Comparing 2023 year-to-date to the same period of time in the peak year of 2021, shootings in most CVI communities are down. Many exceed the citywide decline.

Citywide decline in shootings 2021 YTD to 2023 YTD (Sept. 8) **-33.06%**

CVI organizations embrace accountability and transparency.

CVI organizations in Chicago's growing network recognize that accountability and transparency are critical to building support for this work. To that end, those with capacity are committed to tracking and publishing data on their impact, being transparent about their work, and being responsive to media inquiries. They recognize they are accountable to the same metrics as the Chicago Police Department, specifically, the number of homicides and shootings. However, most CVI organizations go beyond the raw shootings data to track the number of people served, services provided, rearrest rates and shooting rates for participants in CVI programs. Some also track the number of participants earning education degrees, job placement and endurance in jobs. We are also candid about challenges, including the need to recruit and train many more credible CVI workers, manage a workforce recovering from chronic exposure to violence, better serve out-of-school youth, and support CVI graduates in the legal economy.

Independent researchers evaluate CVI's impact.

CVI organizations partner with Northwestern University's Center for Neighborhood Engaged Research and Science and the University of Chicago's Crime Lab to evaluate their programs.

UChicago Crime Lab says READI Chicago's benefits far outweigh its cost.

A large-scale randomized trial of the Rapid Employment and Development Initiative (READI) Chicago conducted by researchers at the University of Chicago Crime Lab, University of Michigan, and Cornell University shows that it is possible to find and engage men at extremely high risk of gun violence. It further shows that READI's combination of cognitive-behavioral programming and a job, while not lowering all forms of serious violence, may reduce shooting and homicide arrests. For participants referred to the program by community outreach workers, READI clearly and substantially reduces shooting and homicide arrests and victimizations by 79% and 43%, respectively. Overall, the research concludes, in the 20 months after men are referred, READI generated benefits from reduced involvement in crime and violence that were between 4 and 20 times the cost to run the program.

Corners research on CP4P and CRED shows they are saving lives.

Northwestern University's Center for Neighborhood Engaged Research and Science (Corners) is the research partner for Chicago CRED and Communities Partnering 4 Peace (CP4P), a consortium of 13 CVI organizations serving 27 Chicago neighborhoods. Since 2020, CORNERS has released a series of research briefs.

- A 2020 analysis of CP4P affirmed that the consortium of CVI organizations were serving an extremely high-risk population and that the communities they served experienced monthly declines in gun violence.
- An August 2020 report highlighted the positive impact CP4P outreach workers have on participants, particularly as it relates to emotion coping and access to resources.
- A September 2020 research brief examined the added burden on outreach workers amidst the COVID outbreak, with many of them managing multiple “epidemics” including gun violence and COVID, as well as racism and police abuse.
- A 2021 analysis of CP4P affirmed that participants in the program are less likely to be shot after joining the program than before joining the program, although they remain at extremely high risk.
- A March 2023 research brief on CP4P estimated that the program has prevented 383 fatal and non-fatal shootings in neighborhoods that they serve.
- A January 2021 research brief explained that participants choose to join CRED for a variety of reasons. They feel safer, they trust CRED outreach workers because many have lived similar lives to them, and they are motivated by the benefits of joining, including a modest stipend and development of meaningful relationships.
- An August 2021 research brief suggested that participants in Chicago CRED are 50 percent less likely to become victims of gun violence after joining the program, though they remain at extremely high risk. Research further showed they were far less likely to be rearrested for a violent crime once they joined the program.

Private funders have built the network of CVI providers.

CVI organizations in Chicago began with private funding, primarily through The Partnership for Safe and Peaceful Communities (PSPC), a coalition of more than 50 foundations and private funders working together to support promising solutions to addressing gun violence. Collectively, private donors have committed over \$300 million to community violence intervention. PSPC also supports gun policy reform, public safety reimagining and reform and grassroots efforts and neighborhood activities that create safe spaces and promote peace.

Local and state governments are now helping to fund CVI. Business community is poised to contribute.

More recently, the City, County and State have begun investing in CVI organizations and the business community, through the Civic Committee of the Commercial Club, has further vowed to raise tens of millions of dollars to support CVI. With state funding, CVI programs are now starting in suburban and downstate communities under the banner of the Illinois Peace Project.

PSPC Chicago Fund

For several years, PSPC's Chicago Fund has provided micro-grants of up to \$10,000 to grassroots organizations working to reclaim their neighborhoods. In 2023, the Chicago Fund provided \$2.5M in grants to 253 grassroots organizations to host activities throughout the summer and fall in 24 neighborhoods on the South and West Sides. Grantee activities are focused on increasing community cohesion and safety, and ranged from community gardening, mentoring, arts and culture, music festivals, youth sports programs, block clubs, and wellness activities.

FLIP deters gun violence at the most dangerous locations in Chicago.

- FLIP (Flatlining Violence Inspires Peace) is a program that began in 2018 with private funding serving a handful of neighborhoods that experience high levels of gun violence. Under the program, individuals caught up in street life are recruited by CVI organizations to occupy the most dangerous locations in the city (“Hot Spots”) during summertime evenings and weekends in order to deter violence.
- Starting in 2023, with state funding, the program has expanded to over 100 “hot spots” in 14 neighborhoods with over 500 “peacekeepers” on-duty year-round.
- Neighborhoods served include Austin, Brighton Park, East and West Garfield Park, Englewood, Grand Crossing, Humboldt Park, New City, North Lawndale, Roseland, Little Village, South Shore, West Pullman and Woodlawn.
- Corners research shows that the presence of unarmed FLIP workers dramatically reduces the number of shootings in the immediate area surrounding “hot spots.” The research also shows that most of the 14 communities served by FLIP workers have experienced overall reductions in gun violence.
- Research further shows that FLIP workers, in partnership with CVI organizations, have successfully mediated hundreds of disputes that could have led to violence and have negotiated dozens of non-aggression agreements or peace treaties among warring street factions.

Taking CVI to Scale

- Scaling Community Violence Intervention for a Safer Chicago, or SC2, is a growing community of donors, anti-violence practitioners, business leaders and community stakeholders working together to establish fully-resourced, locally-led, at-scale CVI efforts in the 20 Chicago communities with the highest levels of gun violence.
- Citywide, CVI organizations serve an estimated 15-20 percent of the highest-risk individuals in the city. SC2’s goal is to increase this to 50 percent in five years and 75 percent in 10 years. The larger goal is a 50 percent reduction in shootings and homicides in five years and a 75 percent reduction in ten years.
- North Lawndale is the first community to take this approach with five organizations collaborating to serve more than 50% of the highest-risk people in the community. The effort is being independently evaluated by Northwestern University.
- The total cost to sustain and scale CVI in an initial group of six to eight communities in the first five years is an estimated \$400 million. With existing private and public resources, roughly half is committed, leaving a gap of \$200 million.
